

# VERITONE ILLUMINATE™

**Cost-effectively Analyze Audio,  
Video & Text-Based Evidence Before  
eDiscovery Review**

Veritone Illuminate minimizes discovery spend and time for legal teams by transcribing, searching and analyzing audio, video and text-based evidence early in a case to quickly identify, cull-down, and focus on relevant data only.

## Uncover Early Case Insights - Powered by AI

- Accelerate early case assessment efforts by automatically making unstructured data searchable by keyword, faces, objects and more
- Reveal front-end insights that might not have been uncovered in subsequent search efforts with cutting-edge conceptual and structured text analytics
- Meet information privacy requirements by obscuring sensitive information with Veritone Redact

## Realize Significant Cost Savings

- Minimize storage costs by culling and analyzing large volumes of evidentiary media at scale
- Reduce translation costs by leveraging automated machine-based capabilities to easily translate data from one language to another

## Agnostic, Extensible Platform

- Facilitate downstream review via one-click export of media assets and transcripts that can be imported into your eDiscovery platform of choice - such as Relativity, Nuix/Ringtail, OpenText and iConnect
- Flexible deployment and integration options to meet data protection and security requirements

**Learn how Veritone is helping teams boost legal case efforts and gain actionable insights from audio, video, and text documents**
